CBD OFFICE:
5th Floor
George Silundika House.

Dear Sir/Madam

RE: INTRODUCTION TO FISH FARMING PROJECT

We trust that you have a reliable source of water, this eventually refer to a clean source of water considering that you will be processing the fish come harvest time, and you cannot do that with unsafe or unclean water.

Acquiring a Borehole

We send you a diviner or siter who will do the water prospecting on the intended site, does the pegging and prepares a report that will helps us see if drilling is recommended and the required depth. We will then drill and install the pump be it a solar or electrical pump, and tank(s) depending on your budget, but basically we leave you with water coming out from your tap.

Check out the options below

You can now come to our CBD convenient office, see below:

Fish Ponds

We will then send the next team to locate the convenient place for to develop the ponds,

Here are sample pictures:

After the ponds are excavated, the water is treated and we give the fish and feed required to kick start the project. The set of ponds has 8-ponds.

You are probably aware of the general price guide found in the flier below.

START A FISH FARM TODAY

We will

Drill a borehole for you
(If you do not have a reliable source of water)
Make the set of ponds for you
And Yes! Give you the fish and feed too!!!

Now sit back and count 6-months!!!

Check out how low you need to start
The ponds are divided into three types:

Nursery: 5m x 5m x 2m.....\$700.00
Breeding: 10m x 10m x 2m.....\$950.00
Grow-Out: 20m x 50m x 2m.....\$2,700.00

....and Yes! That's all you need to get started!
